Easily view and save images from aperture cards, film or microfiche

CONVERT PHOTOGRAPHIC DATA TO DIGITAL FORMAT WITH THE DRS 10000/UNIVERSAL

The DRS10000 is an easy to use microfilm reader/scanner with optional attachments for roll microfilm, microfiche and aperture cards. With its low price and a very small foot print the DRS10000 Microfilm Reader/Scanner brings affordable, compact digital microfilm options to every microfilm media user. The DRS10000 operating system is user friendly making it well suited for public use at campuses, archives and libraries.

A single USB 2.0 connection to a computer supplies power and data line to the DRS10000. "Live " viewing allows researchers to easily scroll through microfilm or microfiche; zoom out for a full page or zoom in for enlarged detail. A single press of a button will capture the image instantly making it immediately available to save, print or transfer with multiple saving options such as CD/DVD or a USB portable device.

With a wide variety of simple interchangeable carriers the DRS10000 will accept 16mm and 35mm roll film aperture cards, microfiche . The single high quality, adjustable lens provides magnifications of 7x.to 48X
